# Fortify Your Defenses:
Essential Cybersecurity Solutions for Organizations

Security Assessment

It's important to establish a baseline and close existing vulnerabilities. When was your last security assessment?

Date:_____

Email Security

Secure your email. Most attacks originate in your email through phishing. We'll help you choose a service designed to reduce spam and exposure to attacks on your staff via email.

Passwords

Apply security policies on your network. Examples: Deny or limit USB file storage access, enable enhanced password policies, set user screen timeouts, and limit user access. We can help evaluate if your organization is ready to adopt passwordless authentication.

Security Awareness

Train your users - often!
Teach them about data security, emails attacks, and your policies and procedures. We offer a web-based training solution and "done for you" security policies.

Did you know?

9.48M is the average total cost of a data breach in the US in 2023. Ranking the highest globally.

43% of all cyber-attacks target small businesses

**2/3** of breaches were not identified by the organizations' internal security team or tools

Advanced Endpoint Detection & Response

Protect your computers data from malware, viruses, and cyberattacks with advanced endpoint security. Today's latest technology (which replaces your outdated antivirus solution) protects against file-less and script-based threats and can even rollback a ransomware attack.

Multi-Factor Authentication

Utilize Multi-Factor Authentication whenever you can, including on your network, banking websites, and even social media. It adds an additional layer of protection to ensure that even if your password does get stolen, your data stays protected.
Computer Updates

Keep Microsoft, Adobe, and Java products updated for better security. We provided a "critical update" service via automation to protect your computers from the latest known attacks.

Dark Web Research

Knowing in real-time what passwords and accounts have been posted on the Dark Web will allow you to be proactive in preventing a data breach. We scan the Dark Web and take action to protect your business from stolen credentials that have been posted for sale.

SOC and SIEM

(Security Operations Center and Security Information & Event Management)

Our SOC offers a dedicated information security team, 24/7 monitoring, and network analysis. The SIEM tools provide threat hunting, log ingestion, Intel agnosticism, threat management, and more.

Trusted Advisor

One of the most important ways to fortify your cybersecurity defenses is to have a trusted advisor to assist you in choosing the best security practices, and aid in implementing them across your organization.

Web Gateway Security

Internet security is a race against time. Cloud-based security detects web and email threats as they emerge on the internet, and blocks them on your network within seconds - before they reach the user.

Firewall

Turn on Intrusion Detection and Intrusion Prevention features. Send the log files to a managed SIEM. And if your IT team doesn't know what these things are, we can help!

Cyber Insurance

We can help your organization meet cyber insurance requirements so you can protect your income and business from cyber-attacks.

Backup

Backup local. Backup to the cloud. Have an offline backup for reach month of the year. Test your backups more often. And if you aren't convinced your backups are working, properly call us!

If your organization does not have all of these solutions in place reach out to us today!
